Build better software for smarter products

servionᵗ

Currently serving
10 billion
customer interactions

Servion enables business transformation for enterprises in the area of Customer Experience Management. Over the last two decades, Servion has evolved from being a single channel expert then to now converting omni-channel touch points into customer journeys with over 10 billion customer interactions in 60 countries across 4 continents. Servion's CX experts based in USA, UK, UAE, Singapore, and India deliver measurable outcomes through consulting, advanced technologies and industry-specific IP platforms.

Software Engineering

We drive the transformation of product ideas into market realities through our cutting-edge software engineering frameworks. Our full-scale software engineering services speed up product development while enabling faster go-to-market and business agility.

What we offer

HMI Development

We simplify and develop smart HMIs in a fully visual environment with the end user in mind.

- Rapidly deploy enhanced and highly customizable multiscreen HMIs
- Leverage end-user friendly UI controls
- Cater to increasing demand of personalized product experiences

Architecture Design

We design mature and advanced software architecture to make sure your products meet your long-term business objectives.

- Access a robust set of architectural requirements and designs
- Meet pressing issues of software maintainability, scalability and performance
- Address product-launch related issues

CI/CD

We offer a set of continuous integration (CI) and continuous delivery (CD) services to efficiently build, package, and test applications.

- Automate delivery of applications to specific infrastructure environments
- Synchronize development and operations teams for faster software delivery
- Enable quicker security feedback cycles

Containerization, Microservices, Middleware

We provide orchestration services that bypasses traditional product development challenges through a lightweight and fine-grained approach.

- Harness application containerization to meet rising software availability demand
- Manage continuous development and deployment of microservices
- Use multipurpose middleware to stitch together disparate applications

Application Security

We help you start and scale your application security coverage to get past product vulnerability barriers.

- Prioritize remediation activities and gain a contextual view of fixes
- Easily integrate with overall security infrastructure
- Stay on track to meet product launch goals without last-minute delays

Why choose us

1	2	3	4
Better equipped to solve the most complex engineering challenges	Rapid iterative software development using next-gen technologies	Improved ability to release newer versions of engineering applications or products	Increased capacity to keep pace with rapidly evolving technology platforms
